## What does the strategy invest in?

The Lazard Global Equity mandate is an actively-managed, unconstrained strategy designed to leverage Lazard's best ideas worldwide. It is focused on high-quality, financially productive companies supplemented by stocks in which we anticipate positive changes in returns. The Portfolio invests in listed equity securities of companies located in both developed and emerging markets.

## Investment manager overview

Since 1848, Lazard has remained a trusted advisor to governments, financial institutions, public and private retirement plans, and individuals around the world.

Lazard Asset Management is the principal asset management subsidiary of Lazard Ltd., and today represents approximately half of the firm's revenue. With more than 300 investment personnel in 18 cities across 13 countries, Lazard Asset Management offers investors an array of traditional and alternative investment solutions. We believe our global reach, unique identity, diverse product platform, and strong client relationships will allow us to maintain our preeminent position in the marketplace.

## Investment philosophy

Lazard's investment philosophy is based on value creation through the process of bottom-up stock selection. Our relative value philosophy is implemented by assessing the relationship between valuation and financial productivity for an individual security. We believe that financial productivity (the return a company generates) measures how effectively a company is putting its shareholders' capital to work – and ultimately this drives valuation. Assessing a company's financial productivity is an important part of our research process, as it is critical to assessing a company's value.

We believe that the best companies often sustain higher levels of financial productivity for longer than the market expects, leading to valuation opportunities and market inefficiencies. We also believe that opportunities exist among companies to improve returns, but less often than investors.

## Investment process and risk controls

The strategy invests in equity securities, principally common stocks, of companies that the Investment Manager believes have strong and/or improving financial productivity and are undervalued based on their earnings, cash flow or asset values. In managing the strategy, the Investment Manager utilizes a flexible investment approach and engages in bottom-up, fundamental security analysis and selection. The mandate may invest in securities across the capitalization spectrum. The Investment Manager will allocate the Portfolio's assets among various regions and countries, including the United States (but in no less than three different countries). The Portfolio's investments in non-US companies may include companies whose principal business activities are located in emerging market countries.

<sup>1</sup> Relative Value – Investing style that focuses on relative company to competitor value, in addition to absolute and intrinsic value

<sup>2</sup> Style represents the aggregate characteristics of the underlying holdings within this model. Market capitalization measures the aggregate market value of the outstanding shares of a company. Large-cap stocks are defined as the group that accounts for the top 70% of the capitalization of each geographic area; mid-cap stocks represent the next 20%; and small-cap stocks represent the balance.

The return data is as at December 31, 2025. Indicated rates of return are historical annual compounded total returns including reinvestment of all distributions for the period ended, and do not take into account management expenses, account sales, redemption, distribution or optional charges or income taxes payable by any security holder that would have reduced returns.
